Features:

- **The chemical composition is the exact same.**
Now indicated on the bottle according to European laws, as well as storage instruction.
- **The pump has been improved in two ways:**
 - 1) The new pump spring does not touch the liquid.
We have had some unfortunate experiences with the previous pumps. Sometimes the liquid made a chemical reaction with the metal of the spring and ended up breaking.
 - 2) The pump now dispenses 2 mL (previously 1.2 mL) which makes it easier to calculate how many times you need to press the pump to make your dosage.
- **The name change** is to avoid any confusion about the product that could occur especially when sold outside Europe.
- **The bottle** is a bit shorter and thicker, but the content is the same as previous bottles 125/300 mL.
- **Item no., barcode, number of bottles per pack** remain unchanged.
